

Global Positioning in Stocks

Contrarians beware

Well-owned stocks have outperformed

In the last 12 months, contrarian investors may have struggled as the most well-owned stocks globally (top 20% by "Ownership") averaged [47.0%](#), while the "Low Ownership" averaged 32.4%. Currently, [92%](#) of relevant funds globally own TSMC. The other most well-owned stocks globally are ARM (89%), Microsoft (84%), [NVIDIA](#) (75%), Amazon (74%), [Tencent](#) (72%), [ASML](#) (71%), Broadcom (70%), and [Meta](#) (68%).

Long-only funds added Materials and Energy last month

In April, [long-only funds](#) globally added exposure to Materials (+\$6.8bn) and Energy (+\$5.3bn). In contrast, funds reduced exposure to Semis (-\$50.6bn) and sold shares in Diversified Financials (-\$17.0bn), Software (-\$9.9bn), and Consumer Staples (-\$9.7bn). During the month, long-only funds bought the most shares in Japan (+\$4.9bn) and sold shares in the US ([-\\$61.4bn](#)) and Emerging Markets (-\$50.9bn).

Crowded Positives vs Under-owned Negatives

In the last 12 months, "Crowded Positives" (well-owned stocks + Positive Triple Momentum) have outperformed by 4.1%. The current [Crowded Positives](#) include TSMC, Siemens Energy, KLA, MediaTek, and TotalEnergies. In the last 12 months, Under-owned Negatives have underperformed by -2.5%. "[Under-owned Negatives](#)" currently include Salesforce, ServiceNow, Intuit, Bharti (Airtel), and Infosys.

Chart 1: Positioning and Triple Momentum relative cumulative performance: Last 12-months

In the last year, Crowded Positives outperformed, Under-owned Negatives underperformed

Notice to Readers:

The various screens identified in this report are intended to be indicative metrics only and may not be used for reference purposes or as a measure of performance for any financial instrument or contract, or otherwise relied upon by third parties for any other purpose, without the prior written consent of BofA Global Research. These screens were not created to act as a benchmark.

The screens in this report are not a recommended list either individually or as a group of stocks. Investors should consider the fundamentals of the companies and their own individual circumstances/objectives before making any investment decisions.

Triple Momentum is intended to be an indicative metric only and may not be used for reference purposes or as a measure of performance for any financial instrument or contract, or otherwise relied upon by third parties for any other purpose, without the prior written consent of BofA Global Research. Triple Momentum was not created to act as a benchmark.

Some of the analysis as described in this report is back-tested and does not represent the actual performance of any account or fund. Back-tested performance depicts the hypothetical back-tested performance of a particular strategy over the time period indicated. In future periods, market and economic conditions will differ and the same strategy will not necessarily produce the same results. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein. In fact, there are frequently sharp differences between back-tested returns and the actual results realized in the actual management of a portfolio. Back-tested performance results are created by applying an investment strategy or methodology to historical data and attempts to give an indication as to how a strategy might have performed during a certain period in the past if the product had been in existence during such time. Back-tested results have inherent limitations including the fact that they are calculated with the full benefit of hindsight, which allows the security selection methodology to be adjusted to maximize the returns. Further, the results shown do not reflect actual trading or the impact that material economic and market factors might have had on a portfolio manager's decision-making under actual circumstances. Back-tested returns do not reflect advisory fees, trading costs, or other fees or expenses.

This report includes factors for informational or descriptive purposes, and inclusion here is not equivalent to a recommendation of the factor or portfolio.

All data in the report is as of 30-Apr-2026 unless stated otherwise.

Executive Summary

This report includes analysis on the following topics:

- Active Exposure - Positioning versus Benchmark
- Equity Flow - Long-only funds
- Fund Ownership – Proportion of funds owning a stock
- Combining Fund Ownership & Active Exposure
- Four Stock Screens
- Stock Positioning Charts
- Back-testing
- Methodology changes versus previous version of this analysis

Active Exposure – Positioning versus Benchmark

Long-only funds' declared portfolio holdings versus benchmark

Each month we analyze the declared portfolio holdings of large active long-only funds globally. Funds are included in the analysis if (i) they manage more than US\$500m in equities, (ii) declare portfolio holdings on a regular basis, (iii) we can identify the benchmark of these funds, and (iv) we have access to the constituents of the benchmark. We review the funds included in the analysis annually. This analysis currently includes more than 5,647 active long-only funds managing more than US\$29 trillion in equities. We identify the benchmark of each fund, and there are more than 913 unique benchmarks across the funds in this analysis.

To find the active exposure for each fund, we compare the stock holdings versus the specific benchmark disclosed by the relevant fund to establish relative overweight and underweight stock positions ("Relative Weight"). The relative positions are weighted by the dollar value of the relative positions to calculate AUM-weighted relative weight. We aggregate the US dollar-weighted overweight and underweight positions by stock, sector, country, and region in order to monitor how funds' active exposures against the benchmarks change through time.

The chart below is an example of Active long-only funds' relative weight for a stock.

Chart 2: Stock A - Long-only Funds Active Exposure (Relative Weight %) vs identified Benchmarks

Active Long-only funds have been persistently overweight

Equity Flow –Long-only Funds

Value of shares bought and sold by long-only funds

In addition to monitoring Active Exposure versus benchmark, we also calculate the value of the shares that long-only funds (active and passive) have bought and sold each month. Each month, we calculate the change in the number of every share held in each portfolio and disclosed by the relevant long-only fund, and multiple this by the respective Volume Weighted Average Price (VWAP) for the month. We believe VWAP is a reasonable approximation of the price at which funds may have bought and sold stocks during the month. It's worth noting the Active Exposure versus benchmark can be impacted by 1) changes to stock holdings, but also 2) changes to benchmark weights, and 3) the performance of stocks (e.g. an underweight position increases in magnitude if a stock outperforms even if no shares were sold).

Client have consistently asked for information on what funds are buying and selling. To address this question we introduce the Equity Flow analysis. We believe Equity Flow effectively determines the contribution to the change in the active exposure from funds buying and selling shares. We aggregate the US dollar value of the change in the declared portfolio holdings by stock, sector, country, and region. The chart below is an example of the value of Active long-only funds' cumulative buying and selling in aggregate for all listed China stocks.

BofA GLOBAL RESEARCH

Fund Ownership

For each stock in the analysis, every month we calculate “Fund Ownership” as the proportion of relevant Active Long-only funds that own a stock (e.g. 73% of relevant funds own Stock B) at the end of each month. A relevant fund is one for which the stock is included in the fund’s benchmark, or the fund owns the stock even if it is not in the benchmark. For example, if the total number of funds in the analysis is 1000, but a certain stock is only in the benchmark of 180 funds, and 150 funds in total own the stock, of which 20 funds own the stock even though it is not in the benchmark of that fund, then Fund Ownership is 75% ($150 / (180 + 20)$).

The example chart below shows the proportion of Active long-only funds in the analysis that own Stock A.

Chart 5: Stock B: Fund Ownership = Proportion of Active Long-only Funds holding the stock

Fund Ownership of Stock B has increased through time and is now at all-time high

BofA GLOBAL RESEARCH

Combining Fund Ownership & Active Exposure

Combining fund ownership levels and relative weight

We illustrate in quadrant charts (Chart 5) which stocks have various combinations of 1) Above/Below-median Fund Ownership, and 2) Active Exposure (Overweight/Underweight):

- Above-median Fund Ownership (“High Fund Ownership”) + Overweight
- Above-median Fund Ownership (“High Fund Ownership”) + Underweight
- Below-median Fund Ownership (“Low Fund Ownership”) + Overweight
- Below-median Fund Ownership (“Low Fund Ownership”) + Underweight

Four Stock Screens

Positioning (Fund Ownership + Active Exposure) + Catalyst (Triple Momentum)

While many investors often aim to do the opposite of what everyone else is doing, it is not necessarily a successful strategy to always be contrarian. Our analysis shows that stocks that have high ownership and are overweight can outperform for years if a stock's fundamentals remain relatively attractive. Therefore, we believe the challenge for investors is to differentiate between crowded trades with a positive catalyst and crowded trades with a negative catalyst. Similarly, there is an opportunity to identify under-owned stocks which have a positive catalyst and under-owned stocks with a negative catalyst.

Our Triple Momentum analysis combines earnings, price, and news momentum to determine when a stock is in vogue or not in vogue, and is useful for identifying stocks with catalysts for a potential change (positive or negative) in subsequent performance. Methodology for Triple Momentum is detailed in "[Triple Momentum Allocator](#)" report.

We therefore combined the analysis we introduced above with our Triple Momentum Strategy to create the Four Stock Screens. These are:

- **Crowded Positives (Consensus)**
High Fund Ownership + Overweight + Positive Triple Momentum
- **Crowded Negatives (Contrarian)**
High Fund Ownership + Underweight + Negative Triple Momentum
- **Under-owned Positives (Contrarian)**
Low Fund Ownership + Overweight + Positive Triple Momentum
- **Under-owned Negatives (Consensus)**
Low Fund Ownership + Underweight + Negative Triple Momentum

Chart 6: Concept: Positioning and Triple Momentum Quadrants

The Positioning and Triple Momentum Quadrant charts illustrate combinations of 1) fund ownership (Y-axis), 2) active exposure (X-axis), and 3) Triple Momentum (colour)

Source : BofA Global Quantitative Strategy

BofA GLOBAL RESEARCH

The three components included in this analysis are Fund Ownership, Active Exposure (Relative Weight), and Triple Momentum. Refer to the Appendix A for back-testing of each of the three components separately, and the eight combinations of High and Low Fund Ownership, Active Exposure (Overweight/Underweight), and Positive and Negative Triple Momentum.

Stock Positioning Charts

The “[Stock Positioning Charts](#)” section of this report includes charts for six Most Important Stocks for each covered region (US, Europe, Japan, Asia Pac ex-Japan, Emerging Markets). Importance is determined by multiplying the market cap of the stock by the standard deviation of the relative return of the stocks versus the MSCI AC World Index over the preceding ten years.

For each of the six Most Important Stocks in every region, two charts are included:

- **Cumulative Equity Flow chart**
The cumulative value of the net shares bought and sold by Long-only funds
- **Positioning**
 - 1) Fund Ownership = Proportion of Active long-only funds holding the stock, and
 - 2) Active exposure = Relative Weight versus Benchmark

Methodology changes versus previous version of this analysis

We have been publishing “Global Positioning in Stocks” since November 2015. In this modified version of Global Positioning in Stocks, we still monitor how active long-only funds are positioned versus benchmark but have included new analysis based on client feedback. “Equity Flow” focuses on the value of the stocks that are bought and sold by funds each month. We have also back-tested the performance of four stock screens which combine positioning data with Triple Momentum to highlight which crowded positions have positive catalysts and which have negative catalysts. Similarly, we screen for under-owned stocks with negative momentum and under-owned stocks with positive momentum.

Changes to the analysis in May-2025 are summarized below.

Previous version: November 2015 to April 2025

- Funds Included = Active + Passive
- Focus on Active Exposure = overweights / underweights (equal-weighted across all funds, and also weighted by the dollar value of the positions)
- Performance of overweights / underweights
- Included hundreds of charts = stocks, sectors, countries, regions

New version: May 2025 onwards

- Active Exposures = Active Long-only Funds (excludes Passive), overweights and underweights weighted by AUM (the dollar value of the positions)
- Equity Flow = Active + Passive, Value of shares funds buy and sell each month
- Combine Positioning (Fund Ownership, Active Exposures) with Triple Momentum
- Four stock screens with back-tested performance
- Charts showing key conclusions with a focus on the Most Important stocks.

The conclusions from the previous version of “Global Positioning in Stocks” are available on request.

Methodology

Funds included in this Analysis

We include funds in this analysis if 1) the value of the fund is at least US\$500m in equities, 2) the fund declares portfolio holdings on a regular basis, and 3) we can identify the benchmark of the fund and we have access to the constituents of the benchmark. We update the list of funds included in the analysis annually. If a fund's declared portfolio holdings are more than 12 months old at any month-end, we omit the fund from the analysis from the calculations at that month-end. The most common "age" of portfolio holdings is 2-3 months, and is dependent on the timing of data availability and when our calculations are performed. To provide a more recent snapshot of the value of the fund managers' equity holdings, we have marked-to-market the holdings using the most recent month-end prices. The monthly analysis does not reflect any changes, other than re-pricing in portfolio holdings after the filing dates. The analysis of Active Exposures includes long-only fund holdings (including passive) relative to benchmark but excludes Passive funds because their holdings tend to mirror the benchmark so their Active Exposures are close to zero. The Equity Flow analysis includes data for both Active and Passive funds because assets under management (AUM) has fallen for Active Long-only Funds but increased for Passive funds over the period of the analysis, so including both types of funds is important for capturing a broad measure of equity flow.

Table 1: Positioning - Long-only Funds Summary Stats

Global long-only funds and benchmarks positioning summary

Total Funds	Characteristics
Number of Funds	6,148
Total Value (Equities) of Long-only Funds (\$US millions)	38,638,905
Unique Benchmarks	965

Total Active Funds	Characteristics
Number of Funds	4,609
Total Value (Equities) of Active Long-only Funds (\$US millions)	18,067,951
Unique Benchmarks	591

Total Passive Funds	Characteristics
Number of Funds	1,539
Total Value (Equities) of Passive Long-only Funds (\$US millions)	20,570,954
Unique Benchmarks	528

BofA GLOBAL RESEARCH

Stocks included in this Analysis

The stocks included in this analysis are constituents of the MSCI AC World index as at each month-end. For each region included in the MSCI AC World index, we also include listed stocks not included in the MSCI AC World Index but which have average daily turnover greater than \$5m. We do this to include non-index stocks that global investors often include in their portfolios (for e.g. HSBC for Asian investors). We also include associated ADRs and GDRs with average daily turnover greater than \$5m. Stocks on the firm's restricted list at the time of the month-end analysis are included in the aggregate country and sector calculations but we omit these stocks from the report.

Relative Weight versus Benchmark

Each fund's stock portfolio weights are compared to the stock weights in that fund's own benchmark. The aggregate active exposure is calculated by weighting each position by the dollar value of the positions across all funds in the analysis.

Data Sources

Sources for this analysis include IBES, RavenPack, Benchmark Indices, Bloomberg, 13F, 13G, 13D, Registration filings (S-1, S-2, S-3), Proxy, 10-K, Insider filings (Forms 3, 4, 5), N-30D, N-Q mutual fund holdings, annual reports, and country specific authorities as collated by FactSet.

Construction Methodology

The back-testing in this analysis is from Jan-15 to Apr-25, and we introduced the current version of the analysis in May-25.

In this analysis, we have back-tested various combinations of 1) Fund Ownership, 2) Active Exposure (Relative Weight), and 3) Triple Momentum to show how each combination would have performed over the testing period.

For each stock in the analysis, each month we calculate a percentile “Factor Rank” from 1 (low) to 100 (high) for Fund Ownership, Relative Weight, and Triple Momentum.

Fund Ownership: The proportion of relevant funds that own a stock, where a relevant fund is one for which the stock is included in the fund’s benchmark, or the fund owns the stock even if it is not in the benchmark.

Active Exposure (Relative Weight): In each fund, the active exposure is calculated as the stock weight in the funds minus the stock weight in the benchmark of the fund. For each stock, the Relative Weight is the US dollar-weighted (AUM-weighted) average of all Active exposures across all funds in the analysis.

Triple Momentum is an amalgamation of Earnings Momentum, Price Momentum and News Momentum. Earnings Momentum is defined as the three-month change in the consensus EPS estimate for each stock. Price Momentum is defined as the slope of the log-linear regression using daily prices over the preceding 12-months. News Momentum captures the trend in news sentiment based on Natural Language Processing analysis of news articles from the preceding 90 days.

The “Four Stock Screens” are determined at the end of each month using month-end data.

Crowded Positives: The “Crowded Positives Rank” for each stock is a percentile rank based on the average of the Fund Ownership Rank, Active Exposure (Relative Weight) Rank, and Triple Momentum Rank. The back-testing results for the Crowded Positives is based on the stocks in the top quintile (top 20%) by the Crowded Positives Rank. The Crowded Positives screen includes the 20 Most Important Stocks in the top quintile (top 20% of stocks) by the Crowded Positives Rank.

Crowded Negatives: The “Crowded Negatives Rank” for each stock is a percentile rank based on the average of the Fund Ownership Rank, 100 minus the Active Exposure (Relative Weight) Rank, and 100 minus the Triple Momentum Rank. The back-testing results for the Crowded Negatives is based on the stocks in the top quintile (top 20%) by the Crowded Negatives Rank. The Crowded Negatives screen includes the 20 Most Important Stocks in the top quintile (top 20% of stocks) by the Crowded Negatives Rank.

Under-owned Positives: The “Under-owned Positives Rank” for each stock is a percentile rank based on the average of 100 minus the Fund Ownership Rank, the Active Exposure (Relative Weight) Rank, and the Triple Momentum Rank. The back-testing results for the Under-owned Positives is based on the stocks in the top quintile (top 20%) by the Under-owned Positives Rank. The Under-owned Positives screen includes the 20 Most Important Stocks in the top quintile (top 20% of stocks) by the Under-owned Positives Rank.

Under-owned Negatives: The “Under-owned Negatives Rank” for each stock is a percentile rank based on the average of 100 minus the Fund Ownership Rank, 100 minus the Active Exposure (Relative Weight) Rank, and 100 minus the Triple Momentum Rank. The back-testing results for the Under-owned Negatives is based on the stocks in the top quintile (top 20%) by the Under-owned Negatives Rank. The Under-owned Negatives screen includes the 20 Most Important Stocks in the top quintile (top 20% of stocks) by the Under-owned Negatives Rank.

The three components included in this analysis are Fund Ownership, Active Exposure (Relative Weight), and Triple Momentum. Refer to the Appendix A for back-testing of each of the three components separately, and the eight combinations of high and low Fund Ownership, Active Exposure (Overweight/Underweight), and high and low Triple Momentum.

The “Four Stock Screens” act as stock screens and not as recommended stock portfolios. The screens are not a recommended list either individually or as a group of stocks. Investors should consider the fundamentals of the companies and their own individual circumstances/objectives before making any investment decisions.

Stocks in the firm’s restricted list are not included in this analysis.

The “Four Stock Screens” are determined using data and closing prices corresponding to the market's close on the last business day of each month from MSCI, IBES, FactSet, and RavenPack databases.

We expect to publish these Four Stock Screens each month in this “Global Positioning in Stocks” report.

Performance Calculation Methodology

Refer to appendix “Positioning and Triple Momentum Performance” for detailed performance data.

Rebalancing and back-tested performance calculations are conducted each month, using data and closing prices corresponding to the market’s close on the last business day of each month. Back-tested performance is computed on the basis of price return. Performance of the Ownership and Active Exposure (Relative Weights) analysis is presented relative to the “Global Positioning Universe”, which is the equal-weighted performance of the stocks in the analysis for which positioning data exists. Performance of the analysis which combines positioning and Triple Momentum analysis is presented relative to the “Global Combined Universe”, which is the equal-weighted performance of the stocks in the analysis for which both positioning and Triple Momentum data exists. We have decided to use equal-weighted performance as it eliminates the possibility of a few very large stocks skewing the results. This is more important now than ever given a small number of stocks have been dominating market performance in recent years.

The analysis is back-tested and does not represent the actual performance of any account or fund. Back-tested performance depicts the hypothetical back-tested performance of a particular strategy over the time period indicated. In future periods, market and economic conditions will differ and the same strategy will not necessarily produce the same results. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein. In fact, there are frequently sharp differences between back-tested returns and the actual results realized in the actual management of a portfolio. Back-tested performance results are created by applying an investment strategy or methodology to historical data and attempts to give an indication as to how a strategy might have performed during a certain period in the past if the product had been in existence during such time. Back-tested results have inherent limitations including the fact that they are calculated with the full benefit of hindsight, which allows the security selection methodology to be adjusted to maximize the returns. Further, the results shown do not reflect actual trading or the impact that material economic and market factors might have had on a portfolio manager’s decision-making under actual circumstances. Back-tested returns do not reflect advisory fees, trading costs, or other fees or expenses.

This report includes factors for informational or descriptive purposes, and inclusion here is not equivalent to a recommendation of the factor or portfolio.

Past performance is no guarantee of future results.

Limitations

Below is a non-exhaustive list of the limitations this analysis:

- We use the most recent data available for each fund, excluding data that is more than 12 months old. The most common “age” of portfolio holdings is 2-3 months, and is dependent on the timing of data availability and when our calculations are performed. To provide a more recent snapshot of the value of the fund managers’ equity holdings, we have marked-to-market the holdings as of the most recent month-end. The report does not reflect any changes, other than re-pricing, in portfolio holdings after the filing dates. Any fund may have changed portfolio holdings since the last filing date.
- The Equity Flow for each stock is calculated as the change in the number of shares held by the funds in the analysis multiplied by VWAP. Any particular fund’s sale or purchase of a stock may have been at a different price from VWAP.
- All calculations have been converted to a common currency (USD), so currency moves may impact results.

- We have used Triple Momentum to capture positive and negative catalysts. The signals from Triple Momentum may change quickly when sudden events such as trade war impact the price, earnings, and news of a stock.
- This analysis does not include funds which do not declare portfolio holdings on a regular basis, or it is not possible to identify the benchmark of the fund, or we do not have access to the benchmark constituents of the benchmark. We review the fund constituents annually. This analysis does not include all investor positions including retail investors, funds managing less than US\$500m in AUM, Hedge Funds who typically do not regularly declare all long and short positions, Sovereign Wealth Funds, and more.
- The Equity Flow calculation is based on the US dollar value of the change in the total share holdings of the funds included in this analysis. Therefore, Equity Flow may be negative if investors shift exposure from the funds in this analysis to other funds which are not included in this analysis.

Four Stock Screens

Chart 8: Positioning and Triple Momentum Quadrants

Crowded Positives include TSMC, Siemens Energy, KLA, and MediaTek

Source : BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges
BofA GLOBAL RESEARCH

Our back-testing (from Jan-15 to Apr-25) showed that the consensus screens would have performed better than the contrarian screens:

- Crowded Positives would have performed better than Under-owned Positives
- Under-owned Negatives would have performed better than Crowded Negatives

Chart 9: Global Stock Positioning and Triple Momentum: Relative Cumulative Performance

CROWDED Positive stocks would have outperformed the Global Combined Universe by +4.4%, on average based on our back-testing

Source : BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges
Performance is shown relative to the average performance of stocks in the analysis with Fund Ownership, Relative Weight, and Triple Momentum Ranks, where data exists. The shaded area shows back-tested results during the period from Jan-15 to Apr-25. The unshaded portion represents actual performance since May-25. Back-tested performance depicts the theoretical (not actual) performance of a particular strategy over the time period indicated. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein.

BofA GLOBAL RESEARCH

Appendix A: Performance Overview

Positioning and Triple Momentum Performance

Chart 112: Global Stock Positioning and Triple Momentum: Relative Cumulative Performance

CROWDED Positive stocks have outperformed the Global Combined Universe by +4.4% since Jan-15, on average

Source : BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges

Performance is shown relative to the average performance of stocks in the analysis with Fund Ownership, Relative Weight, and Triple Momentum Ranks, where data exists. The shaded area shows back-tested results during the period from Jan-15 to Apr-25. The unshaded portion represents actual performance since May-25.

Back-tested performance depicts the theoretical (not actual) performance of a particular strategy over the time period indicated. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein.

BofA GLOBAL RESEARCH

Chart 113: Global Stock Positioning and Triple Momentum relative cumulative performance: Last 12-months

CROWDED Positive stocks have outperformed by +4.1% in the last 12m

Source : BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges

Performance is shown relative to the average performance of stocks in the analysis with Fund Ownership, Relative Weight, and Triple Momentum Ranks, where data exists.

BofA GLOBAL RESEARCH

Chart 114: Global Fund Ownership (top and bottom quintile): Relative Cumulative Performance

High Fund Ownership stocks tend to outperform Low Fund Ownership stocks

**Source :** BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges

Performance is shown relative to the average performance of stocks in the analysis with Fund Ownership and Relative Weight, where data exists.

The shaded area shows back-tested results during the period from Jan-15 to Apr-25. The unshaded portion represents actual performance since May-25.

Back-tested performance depicts the theoretical (not actual) performance of a particular strategy over the time period indicated. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein.

BofA GLOBAL RESEARCH

Chart 115: Global Relative Weight (top vs bottom quintile): Relative Cumulative Performance

High Relative Weight (Overweight) stocks have outperformed Low Relative Weight (Underweight) stocks

**Source :** BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges

Performance is shown relative to the average performance of stocks in the analysis with Fund Ownership and Relative Weight, where data exists.

The shaded area shows back-tested results during the period from Jan-15 to Apr-25. The unshaded portion represents actual performance since May-25.

Back-tested performance depicts the theoretical (not actual) performance of a particular strategy over the time period indicated. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein.

BofA GLOBAL RESEARCH

Chart 116: Global Triple Momentum (top vs bottom quintile): Relative Cumulative Performance

Stocks with Positive Triple Momentum have historically outperformed the Negative Triple Momentum stocks

Source : BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges

Performance is shown relative to the average performance of stocks in the analysis with Fund Ownership, Relative Weight, and Triple Momentum Ranks, where data exists.

The shaded area shows back-tested results during the period from Jan-15 to Apr-25. The unshaded portion represents actual performance since May-25.

Back-tested performance depicts the theoretical (not actual) performance of a particular strategy over the time period indicated. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein.

BofA GLOBAL RESEARCH

The four charts below show the performance of each combination of 1) Proportion of Funds 2) Underweight/Overweight and 3) Triple Momentum.

Among stocks in the top-left quadrant (High Fund Ownership and Underweight), stocks with low Triple Momentum (“Crowded Negatives”) generally underperform.

Among stocks in the top-right quadrant (High Fund Ownership and Overweight), stocks with High Triple Momentum (“Crowded Positives”) generally outperform.

Among stocks in the bottom-left quadrant (Low Fund Ownership and Underweight), stocks with low Triple Momentum (“Under-owned Negatives”) generally underperform.

Among stocks in the bottom-right quadrant (Low Fund Ownership and Overweight), stocks with high Triple Momentum (“Under-owned Positives”) generally outperform.

Chart 117: Global HIGH Fund Ownership, UNDERWEIGHT, and Triple Momentum (Crowded Negatives): Relative Cumulative Performance

Stocks with low Triple Momentum ("Crowded Negatives") have historically underperformed the Global Combined Universe

Source : BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges

The shaded area shows back-tested results during the period from Jan-15 to Apr-25. The unshaded portion represents actual performance since May-25. Back-tested performance depicts the theoretical (not actual) performance of a particular strategy over the time period indicated. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein.

BofA GLOBAL RESEARCH

Chart 119: Global LOW Fund Ownership, UNDERWEIGHT, and Triple Momentum (Under-owned Negatives): Relative Cumulative Performance

Stocks with low Triple Momentum ("Under-owned Negatives") have historically underperformed the Global Combined Universe

Source : BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges

The shaded area shows back-tested results during the period from Jan-15 to Apr-25. The unshaded portion represents actual performance since May-25. Back-tested performance depicts the theoretical (not actual) performance of a particular strategy over the time period indicated. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein.

BofA GLOBAL RESEARCH

Chart 118: Global HIGH Fund Ownership, OVERWEIGHT, and Triple Momentum (Crowded Positives): Relative Cumulative Performance

Stocks with High Triple Momentum ("Crowded Positives") have historically outperformed the Global Combined Universe

Source : BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges

The shaded area shows back-tested results during the period from Jan-15 to Apr-25. The unshaded portion represents actual performance since May-25. Back-tested performance depicts the theoretical (not actual) performance of a particular strategy over the time period indicated. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein.

BofA GLOBAL RESEARCH

Chart 120: Global LOW Fund Ownership, OVERWEIGHT, and Triple Momentum (Under-owned Positives): Relative Cumulative Performance

Stocks with high Triple Momentum ("Under-owned Positives") have historically outperformed the Global Combined Universe

Source : BofA Global Quantitative Strategy, MSCI, FTSE, FactSet, Bloomberg, 13F Filings, Benchmark Indices, Country Stock Exchanges

The shaded area shows back-tested results during the period from Jan-15 to Apr-25. The unshaded portion represents actual performance since May-25. Back-tested performance depicts the theoretical (not actual) performance of a particular strategy over the time period indicated. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein.

BofA GLOBAL RESEARCH

Back-testing Results

The three components of this analysis are Fund Ownership, Relative Weights, and Triple Momentum. The back-testing shown below includes the eight combinations of high and low Fund Ownership, high and low Relative Weights, and high and low triple Momentum.

Our back-testing showed the four stocks screens with the most relevant and actionable results are the four below:

- **Crowded Positives (Consensus)**
High Fund Ownership + Overweight + Positive Triple Momentum
- **Crowded Negatives (Contrarian)**
High Fund Ownership + Underweight + Negative Triple Momentum
- **Under-owned Positives (Contrarian)**
Low Fund Ownership + Overweight + Positive Triple Momentum
- **Under-owned Negatives (Consensus)**
Low Fund Ownership + Underweight + Negative Triple Momentum

Additionally, back-testing shows the performance of high (top quintile) and low (bottom quintile) for each of the three components individually.

Table 20: Global Stock Positioning and Triple Momentum: Back-testing results from Jan-15 to Apr-25

Fund Ownership, Relative Weights, and Triple Momentum combinations back-testing performance across different periods (1m, 3m, 12m, YTD)

Fund Ownership + Relative Weight + Triple Momentum	1mth	3mth	6mth	12mth	YTD	Last 5yr	Since Inception Jan-15	Annualised

BofA GLOBAL RESEARCH

Global Quant Publications

Monthly reports schedule

Day 1: [Global Contenders & Defenders](#)

A popular visual model. For each stock, this report graphically shows how consensus earnings expectations have changed over the long term versus the market, and whether recent earnings revisions appear to have been reflected in relative share price performance. Popular ways of using this analysis include 1) reviewing the Contenders and Defenders, 2) perusing individual stock charts, 3) monitoring region, country and sector themes using the “quadrant charts”, and 4) reviewing stock rankings.

Day 1: [Global Performance Monitor](#)

The above linked monthly report analysing the performance of global regions, countries, sectors and identifying the major stock contributors to global equity market performance.

Day 2/3: [Quantessential Style](#)

Style rotation. Different investment styles outperform at various stages of the cycle. This investment style analysis relates performance of seven Quantessential Styles (Value, Growth, Quality, Risk, Momentum, Dividend and Size) to trends in global macro data. Popular uses include 1) when to buy “Deep Value”, “Growthiest of Growth”, and other styles, 2) identifying stocks with various style characteristics, 3) monitoring style performance, and 4) explaining out/under-performance due to style tilts. Regional versions are published in these linked monthly reports for [Global Quantessential Style](#) and [Asia Pac ex-Japan Quantessential Style](#).

Week 1: [Global Fund Performance Monitor](#)

The above linked monthly report analysing the relative returns of large long-only equity funds in order to help fund managers understand how returns have been affected by fund characteristics. Funds are grouped by Region, Investment Style, Active/Passive, Active Share Ratio, Funds Under Management, Stock Size, Number of Stocks, and Portfolio Turnover.

Week 1: [Triple Momentum Allocator](#)

The above linked monthly report highlights the benefits of combining three types of momentum, namely Earnings Momentum, Price Momentum, and News Momentum. Popular uses include 1) Using Triple Momentum for Global Sector Allocation and Region-Sector Allocation, 2) changes in Triple Momentum highlight which signals are fading and when new opportunities are emerging, and 3) trend in Triple Momentum shows which sectors and region-sectors have been in vogue at any point in time in the past.

Week 2: [Global Wave](#)

The Global Wave (report link above) quantifies turning points and multi-year trends in global economic activity. The direction of the global cycle influences equity market performance, regional allocation, country allocation, style allocation, and stock selection. The Bunkers are stocks for a downturn and the Boosters are stocks for an upturn.

Week 2: [Positioning in Stocks](#)

Our Positioning analysis monitors the aggregate positioning of thousands of active long-only funds globally versus benchmark by stock, sector, country, and region. Additionally, “Equity Flow” (dollar value of stocks bought and sold each month) is calculated by stock, sector, country, and region. The challenge is to determine which crowded trades may outperform and which may face performance hurdles. We combine the positioning analysis with Triple Momentum to highlight which crowded positions have positive catalysts “Crowded Positives” and which have negative catalysts “Crowded Negatives”. Similarly, we screen for under-owned stocks with negative momentum “Under-owned Negatives” and under-owned stocks with positive momentum “Under-owned Positives”.

Back-testing highlights the efficacy of these strategies. Regional versions are published in these linked monthly reports for [Global Positioning in Stocks](#) and [Pacific Positioning](#).

Week 3: Quant Panorama

Summary report. In this monthly report, we present all our views and recent research on regional allocation, country and sector allocation, style allocation, and stock selection.

One-stop shopping. Regional versions are published in these linked monthly reports for [Global Quant Panorama](#) and Asia Pac ex-Japan Quant Panorama.

Week 4: [Global Earnings Revision Ratio](#)

Shows trends in earnings expectations at the regional, country and sector level. We also include the Asia analysis for countries and sectors in this monthly report.

Weekly: [High Frequency Monitor](#)

In this above linked weekly report, we monitor high frequency data to help equity investors track short-term changes in market-moving data in order to swiftly identify hot topics and turning points.

Occasional: [Focus Point](#)

The report above contains brief comments on topical issues and new research.

Special Disclosures

Bank of America is currently advising FIBRA Macquarie Mexico on the potential sale of the company to FIBRA Prologis, announced Feb 25 2026.

BofA Securities is currently acting as Financial Advisor to Aligned Data Centers in connection with its proposed sale by Macquarie Asset Management to Global Infrastructure Partners, which was announced on October 15, 2025.

BofA Securities is currently acting as joint financial advisor to ABB Ltd in connection with the sale of its Robotics Division to SoftBank Group Corp, which was announced on October 8, 2025.

Disclosures

Important Disclosures

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. **VOLATILITY RISK RATINGS**, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. **INVESTMENT RATINGS** reflect the analyst's assessment of both a stock's absolute total return potential as well as its attractiveness for investment relative to other stocks within its Coverage Cluster (defined below). Our investment ratings are: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. An investment rating of 6 (No Rating) indicates that a stock is no longer trading on the basis of fundamentals. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster ^{R1}
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

^{R1} Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.

The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.

Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.

This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

These technologies assist our analysts in various aspects of their work, including but not limited to data analysis, content extraction, content creation, data aggregation and summarization and identifying relevant information from diverse sources. All AI-driven processes are subject to review by BofA Global Research employees. BofA Global Research information is distributed simultaneously to internal and client websites and other portals by BofA Securities and is not publicly-available material. Any unauthorized use or disclosure is prohibited. Receipt and review of this information constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion, or information contained herein (including any investment recommendations, estimates or price targets) without first obtaining express permission from an authorized officer of BofA Securities.

Materials prepared by BofA Global Research personnel are based on public information. Facts and views presented in this material have not been reviewed by, and may not reflect information known to, professionals in other business areas of BofA Securities, including investment banking personnel. BofA Securities has established information barriers between BofA Global Research and certain business groups. As a result, BofA Securities does not disclose certain client relationships with, or compensation received from, such issuers. To the extent this material discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this material. BofA Global Research personnel's knowledge of legal proceedings in which any BofA Securities entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this material is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Securities in connection with the legal proceedings or matters relevant to such proceedings.

This information has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of BofAS any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to sustainability in this material is limited as discussed herein and is not intended to provide a comprehensive view on any sustainability claim with respect to any issuer or security.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Securities and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This information may contain links to third-party websites. BofA Securities is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this information and is not incorporated by reference. The inclusion of a link does not imply any endorsement by or any affiliation with BofA Securities. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Securities is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Securities is under no obligation to update this information and BofA Securities ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Securities will not update any fact, circumstance or opinion contained herein.

Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Securities nor any officer or employee of BofA Securities accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this information.
